The new generation of Growing Zones for kids

## What are kids Growing Zones?

The Growing Zone is quite simply a moveable raised vegetable, herb or flower garden.

With its durable timber exterior, the Growing Zones consist of a mobile unit and one or more static units, together with a number of transferable planting pods.

The static units become in essence 'the garden' and the size of the garden is dictated by how many static units are purchased.

Each static unit contains six 12"x12"x12" wire planting pods that are lined with a geo-textile. The pods, which can easily be removed, hold compost and a capillary mat to retain moisture. These can be maintained outdoors if required, but if need be, they can simply be placed into the mobile unit and wheeled inside or to a sheltered area to be worked upon.

Once the pods have been planted up they are wheeled back outside and placed into the static planting pod holder.

The mobile unit is fitted with heavy duty wheels and a secure braking system; which means it is very easy and safe to manoeuvre around the school grounds.

***"School gardens are the linchpin to success in every area of the curriculum, and the benefits will spread through the school and into the wider community."***

Dr Ruth Taylor,  
RHS Head of Education

Children tending their Growing Zone in comfort and safety

The new generation of Growing Zones for kids

## Why Choose our Growing Zones

- 🌿 Limited on space? Growing Zones are the perfect flexible solution.
- 🌿 Rain, shine or frost: just move the planted pods into a sheltered position for protection.
- 🌿 Even the smallest traditional garden requires 'year round' labour intensive work. Our Growing Zone eliminates this.

You decide the size of your garden depending on how many Growing Zones you use.

You can assign a single child or a group to each planting pod and they can grow and maintain their own flowers, vegetables or herbs

Pupils can take their individual planting pods home to look after during the school holidays... one less job for the school caretaker!

### Growing Zones

- 🌿 Easy to weed and water. Work at waist height.
- 🌿 Easy and safe to move.
- 🌿 Available in a range of sizes and styles.

### Quality Guaranteed

Our Growing Zones are made from the highest quality Scandinavian Spruce and all the timber is FSC approved and comes with a 15-year guarantee. They are handmade in the UK by our experienced craftsmen.

The planting pods are manufactured from galvanized welded wire mesh and are lined with a geo-textile and capillary matting.

For further information on our product range, please visit our website or contact us by phone or email.
